# Workshop – Managing Shadow IT with MCAS

Decision makers,  
Security architects

1 hour

Onsite with Microsoft  
Teams

Business requirements are implemented in a rapid and agile manner through the use of cloud resources. IT innovations increasingly arise in business departments without the involvement of the corporate IT department. This increases the risk that compliance standards are not met or are insufficiently met. Businesses are required to make an inventory of all cloud resources used to evaluate them on a risk basis and to manage their use to protect data and identities. Based on practice related scenarios, the workshop will show how shadow IT can be discovered and managed with Microsoft Cloud App Security (MCAS). Further, it will be demonstrated how compliance can be monitored by using reports and how it can be enforced with technical and organizational measures.

## Agenda

Practice related workshop to discover and manage shadow IT with Microsoft Cloud App Security (MCAS).

1. Overview cloud security
2. Shadow IT discovery lifecycle to go
  - Discovering and taking inventory of cloud resources
  - Analyzing the characteristics and potential risks of the cloud resources
  - Risk-based assessment of cloud resources based on compliance standards
  - Evaluating the usage of cloud resources
  - Controlling the usage of cloud resources
  - Continuous monitoring
3. Lunch offered by Microsoft Switzerland

Specific interests or questions can be addressed during the workshop.

## Registration

The workshop takes place on the following date. Please choose the respective URL for an easy registration.

- [Thursday, 28th May 2020, Language: DE](#)  
11 am - 12 pm  
Onsite with Microsoft Teams
- [Thursday, 25th June 2020, Language: DE](#)  
11 am – 12 pm  
Onsite with Microsoft Teams

Further dates will follow.

Please direct questions to Ms. [Pittarello](#).
